Reload to refresh your session. 2.0.0 Comes Finally Approximately 8 months ago, I got an inspiration to creating something that can boom and show menu, which I named it Boom-Menu-Button, BMB. But at that time, I just a fresh-man in Android, knowing little about designing. The codes I wrote severral months ago are ugly and performed low-efficient. Between months, I always think about BMB and try to write a better design pattern for implements of BMB. My first try is BMB-iOS, which contains more family characteristics, for instance, buttons-alignment, text-inside/outside-button. And now the BMB-Android 2.0.0 comes. Gradle & Maven compile 'com.nightonke:boommenu.2.1.1' 'com.nightonke:boommenu.2.1.1' pom Demo Or by link: Boom V2.1.1 in Github Boom V2.1.1 in Fir Wiki Check the wiki to use BMB. Documentation Chapters Issues & Feedbacks Try to tell me the bugs or enhancements about BMB, or contact me with Nightonke@outlook.com / 2584541288@qq.com. Before doing that, having a careful read on readme, wiki and issues is really helpful. ReadMe for Version 1.0.9 or Below If you still wanna use version 1.0.9 or below, you can find the README below: English README 中文文档 But I strongly suggest you to use the newest version. What I'm Doing Page 2 You can't perform that action at this time. You signed in with another tab or window. Reload to refresh your session. Add a description, image, and links to the navigationview topic page so that developers can more easily learn about it. Curate this topic To associate your repository with the navigationview topic, visit your repo's landing page and select "manage topics." Learn more You can't perform that action at this time. Morphing Android menu, back, dismiss and check buttons Have full control of the animation: Including in your project compile 'com.balysv.materialmenu:material-menu:2.0.0' Versions up to 2.0 (deprecated) See README for setting up older versions of the library. Usage MaterialMenuDrawable Use it as a standalone drawable in your Toolbar: private MaterialMenuDrawable materialMenu; protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.toolbar); Toolbar toolbar = (Toolbar) findViewById(R.id.toolbar); setSupportActionBar(toolbar); toolbar.setNavigationOnClickListener(new View.OnClickListener() { @Override public void onClick(View v) { // Handle your drawable state here materialMenu.animateState(newState); } }); materialMenu = new MaterialMenuDrawable(this, Color.WHITE, Stroke.THIN); toolbar.setNavigationIcon(materialMenu); } MaterialMenuView A plain old View that draws the icon and provides an API to manipulate its state. You can embed it in any layout including a Toolbar. Customisation is also available through xml attributes: app:mm_color="color" // Color of drawable app:mm_visible="boolean" // Visible app:mm_transformDuration="integer" // Transformation animation duration app:mm_scale="integer" // Scale factor of drawable app:mm_strokeWidth="integer" // Stroke width of icons (can only be 1, 2 or 3) app:mm_rtlEnabled="boolean" // Enabled RTL layout support (flips all drawables) app:mm_iconState="enum" // Set the initial state of the drawable (burger, arrow, x or check) API There are four icon states: To morph the drawable state MaterialMenu.animateIconState(iconState state) To change the drawable state without animation MaterialMenu.setIconState(iconState state) To animate the drawable manually (i.e. on navigation drawer slide): MaterialMenu.setTransformationOffset(AnimationState state, float value) To hide or show the drawable: MaterialMenu.setVisible(boolean visible) where AnimationState is one of BURGER_ARROW, BURGER_X, BURGER_X_ARROW, BURGER_X_ARROW_CHECK, BURGER_CHECK, X_CHECK and value is between 0 and 2 Note: The icon state is resolved by current offset value. Make sure you use offset between 0 and 1 for forward animation and 1 and 2 for backwards to correctly save icon state on activity recreation. NavigationDrawer slide interaction Implement MaterialMenu into your ActionBar as described above and add a custom DrawerListener: private DrawerLayout drawerLayout; private boolean isDrawerOpened; private MaterialMenuDrawable materialMenu; @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); toolbar = (Toolbar) findViewById(R.id.toolbar); setSupportActionBar(toolbar); materialMenu = new MaterialMenuDrawable(this, Color.WHITE, Stroke.THIN); toolbar.setNavigationIcon(materialMenu); drawerLayout = (DrawerLayout) findViewById(R.id.drawer_layout); drawerLayout.setDrawerListener(new DrawerLayout.SimpleDrawerListener() { @Override public void onDrawerSlide(View drawerView, float slideOffset) { materialMenu.setTransformationOffset(MaterialMenuDrawable.AnimationState.BURGER_ARROW, isDrawerOpened ? 2 - slideOffset : slideOffset); } @Override public void onDrawerOpened(View drawerView) { isDrawerOpened = true; } @Override public void onDrawerClosed(View drawerView) { isDrawerOpened = false; } @Override public void onDrawerStateChanged(int newState) { if(newState == DrawerLayout.STATE_IDLE) { if(isDrawerOpened) { menu.setIconState(MaterialMenuDrawable.IconState.ARROW); } else { menu.setIconState(MaterialMenuDrawable.IconState.BURGER); } } }); Developed By Balys Valentkevicius License Copyright 2016 Balys Valentkevicius Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License.
